

Wolf Techno

E-COMMERCE & INSTALLMENT SHOPPING

Live Production Case Study

www.wolftechno.com · Case Study 2026

A Real Business, Not a Demo

"Every other project in this portfolio is concept work built to demonstrate what I can design. This one is different — it's my own live e-commerce platform, running today, serving real customers, real orders, and real payments."

WHAT IT IS

A full-scale e-commerce storefront selling electronics — phones, laptops, appliances, and more — with a product catalog, cart, checkout, and account system.

WHAT MAKES IT DIFFERENT

Built-in 0% installment financing calculated per product, a digital wallet, purchasable gift cards, and full multi-language localization — features most small e-commerce builds skip entirely.

WHO IT SERVES

Real customers shopping for electronics who want flexible, transparent payment options — split into 3 up to 24 months, zero interest, shown right on the product card.

WHAT RUNS BEHIND IT

A private staff admin dashboard for order management, inventory, and installment application review — intentionally not shown publicly, since it handles real customer data.

Built for Flexible Shopping

01**Installment Checkout**

Every product shows its own monthly breakdown — 3, 6, 10, 12, 18 or 24 months at 0% interest — calculated live, not a flat store-wide rule.

02**Digital Wallet**

Customers can hold a balance and pay from it directly at checkout, alongside card and installment options.

03**Gift Cards**

Purchasable digital gift cards with selectable designs — redeemable at checkout or topped up straight into a customer's wallet.

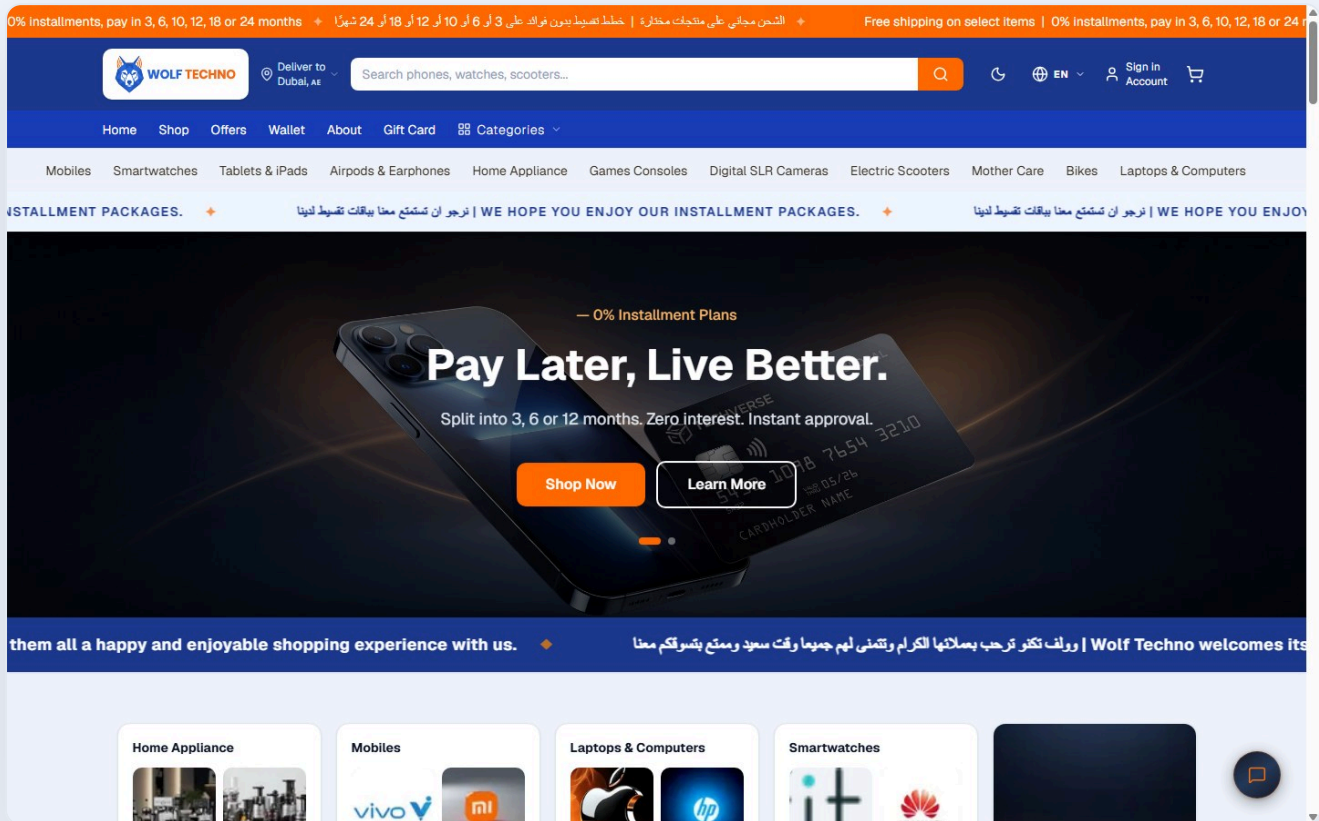

04**Multi-Language Storefront**

Fully localized in English, Arabic, French, Russian, Chinese, Japanese and Urdu — not just translated strings, full RTL support included.

05**Real Payment Infrastructure**

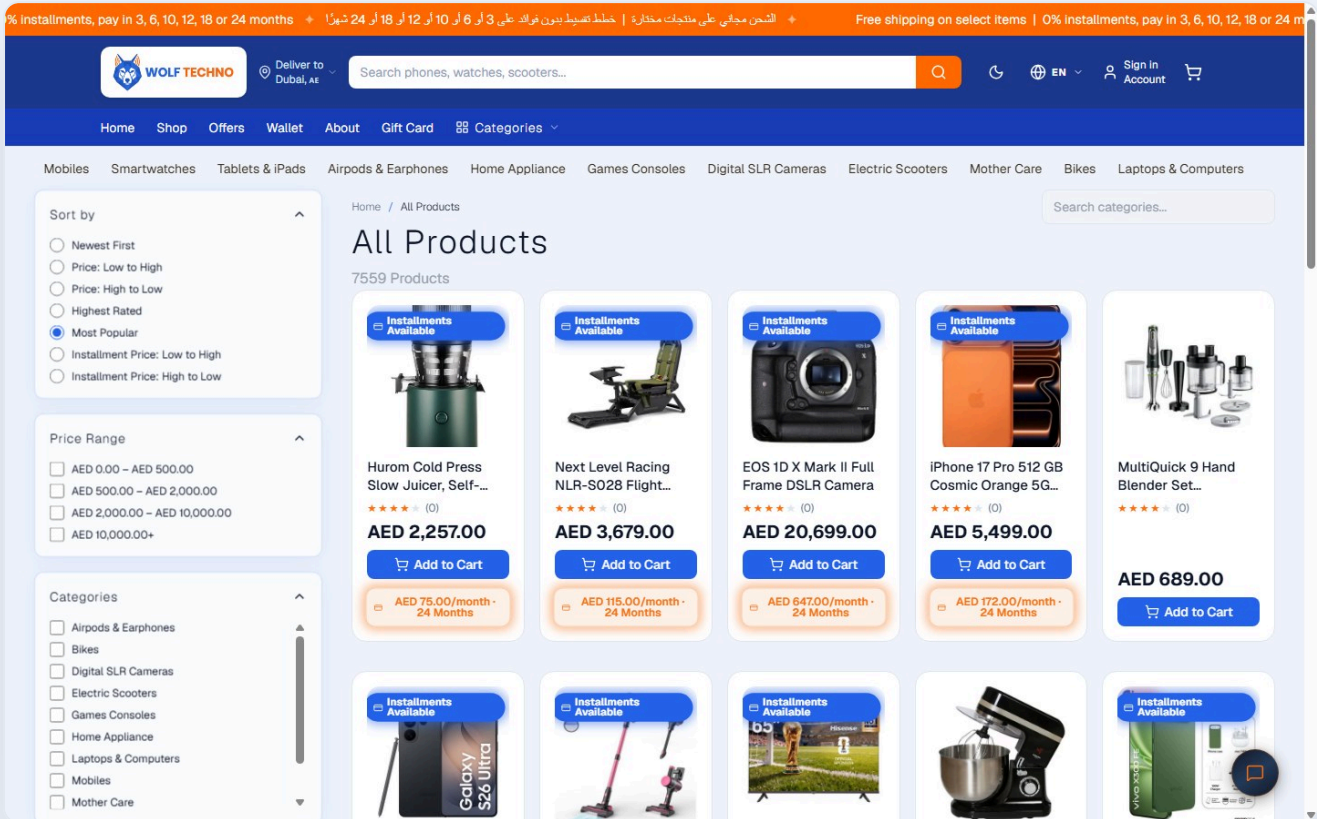

Live card and gateway integrations processing real transactions — not a sandboxed demo checkout.

Homepage

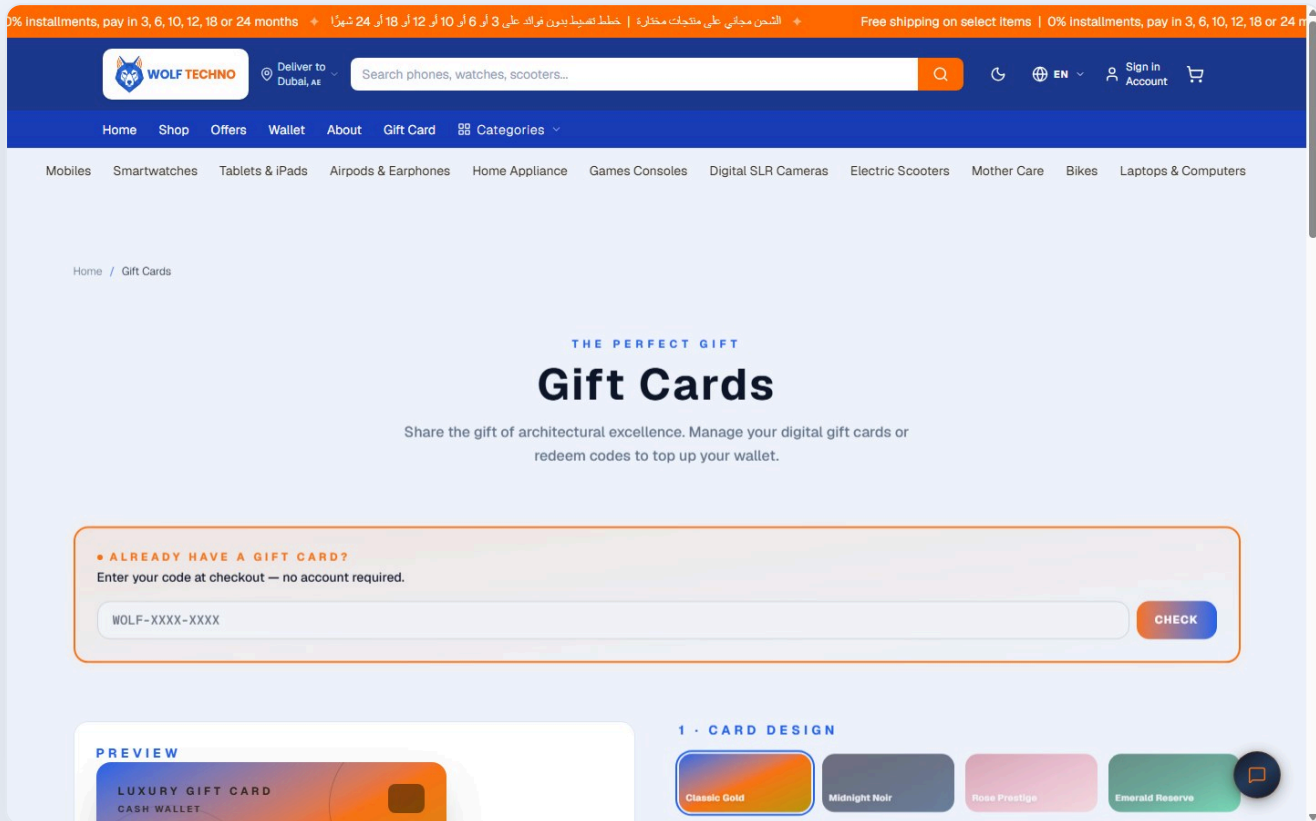

Homepage — leads with the installment value proposition ("Pay Later, Live Better") and a rotating category grid, above a full product catalog.

Product Catalog

All Products — filterable by category and price, with installment pricing surfaced directly on every product card, not buried at checkout.

Gift Cards

Gift Cards — selectable card designs, redeemable at checkout or as a wallet top-up — no account required to redeem a code.

Built to Run in Production

FRONTEND

- ✓ Next.js, server-rendered storefront
- ✓ next-intl — 7-language localization incl. RTL
- ✓ Responsive, mobile-first catalog and checkout

COMMERCE & DATA

- ✓ Supabase — auth, database, real-time
- ✓ Live payment gateway integrations
- ✓ Wallet, gift card and installment ledgers
